EC2 > Auto Scaling groups > Create Auto Scaling group

Step 1: Choose launch template

Step 2: Choose instance launch options

Step 3 - optional: Integrate with other services

Step 4 - optional: **Configure group size and scaling**

Step 5 - optional: Add notifications

Step 6 - optional: Add tags

Step 7: Review

Configure group size and scaling - optional [info](#)

Define your group's desired capacity and scaling limits. You can optionally add automatic scaling to adjust the size of your group.

Group size [info](#)

Set the initial size of the Auto Scaling group. After creating the group, you can change its size to meet demand, either manually or by using automatic scaling.

Desired capacity type

Choose the unit of measurement for the desired capacity value. vCPUs and Memory (GiB) are only supported for mixed instances groups configured with a set of instance attributes.

Units (number of instances)

Desired capacity

Specify your group size.

1

Scaling [info](#)

You can resize your Auto Scaling group manually or automatically to meet changes in demand.

Scaling limits

Set limits on how much your desired capacity can be increased or decreased.

Min desired capacity

1

Max desired capacity

2

Automatic scaling - optional

Choose whether to use a target tracking policy [info](#)

You can set up other metric-based scaling policies and scheduled scaling after creating your Auto Scaling group.

☒ No scaling policies

Your Auto Scaling group will remain at its initial size and will not dynamically resize to meet demand.

☐ Target tracking scaling policy

Choose a CloudWatch metric and target value and let the scaling policy adjust the desired capacity in proportion to the metric's value.

Step 1: Choose launch template

Step 2: Choose instance launch options

Step 3 - optional: Integrate with other services

Step 4 - optional: Configure group size and scaling

Step 5 - optional: Add notifications

Step 6 - optional: Add tags

Step 7: Review

Review

Step 1: Choose launch template

Punto 3: Análisis de Seguridad (AWS CloudTrail)

Descripción del Evento Analizado

Se realizó la auditoría del evento de creación de la instancia EC2 para verificar el origen y la legitimidad de la solicitud.

- Nombre del Evento: RunInstances.
- ID de la Instancia: i-0eab40ff246f0c054.
- Fecha y Hora (EventTime): 2026-03-17T01:35:22Z.
- Usuario (Principal ID): carloschonto2@hotmail.com.
- IP de Origen (sourceIPAddress): autoscaling.amazonaws.com.
- Agente de Usuario (userAgent): autoscaling.amazonaws.com.

Análisis Técnico

1. Origen de la solicitud: El análisis del campo sourceIPAddress indica que la solicitud no proviene de una dirección IP externa o manual, sino de un servicio interno de AWS.
2. Identificación del activador: El campo invokedBy confirma que el evento fue ejecutado por el servicio de Auto Scaling.
3. Conclusión: La instancia fue lanzada automáticamente por el grupo de Auto Scaling para cumplir con la configuración de capacidad mínima definida (1 instancia), garantizando así la disponibilidad del servicio según los requerimientos del examen.

Historial de Actividad Reciente (Últimas 5 acciones IAM)

Para cumplir con la auditoría de usuario, se listan las últimas acciones realizadas en la cuenta:

1. AttachRolePolicy: Asignación de permisos de lectura de EC2 al rol de la función Lambda.
2. UpdateFunctionConfiguration: Ajuste del tiempo de ejecución (Timeout) de la Lambda a 15 segundos.
3. UpdateFunctionCode: Carga del script Python para el monitoreo de instancias.
4. CreateFunction: Creación del recurso Lambda Monitor-Instancia-Carlosortiz.
5. ConsoleLogin: Acceso administrativo a la consola de AWS.

Ya esto es un tema de permisos

Se reviso los permisos y se configuro el AmazonEC2ReadOnlyAccess

Identity and Access Management (IAM)

Permissions policies (1/2)

You can attach up to 10 managed policies.

Filter by Type: All types

Policy name	Type	Attached entities
AmazonEC2ReadOnlyAccess	AWS managed	20
AWSLambdaBasicExecutionRole-57d25660-51fa-42ae-98ab-04...	Customer managed	1

Permissions boundary (not set)

Generate policy based on CloudTrail events

You can generate a new policy based on the access activity for this role, then customize, create, and attach it to this role. AWS uses your CloudTrail events to identify the services and actions used and generate a policy. [Learn more](#)

Access denied to access-analyzer:ListPolicyGenerations

You don't have permission to access-analyzer:ListPolicyGenerations. To request access, copy the following text and send it to your AWS administrator. [Learn more about troubleshooting access denied errors.](#)

Diagnose with Amazon Q

User: arn:aws:iam::654654478122:user/students/carloschonto2@hotmail.com

Action: access-analyzer:ListPolicyGenerations

On resource(s): arn:aws:access-analyzer-east-1:654654478122:*

Context: no identity-based policy allows the action
